

Exam 1 Practical

Goal

Begin to create and style a website for the Juniper Lane Swim Club.

Specification

You are required to meet the following specifications.

Structure

1. Rename the .txt files to be `index.html` and `partyReservations.html` and place them in a folder called `Exam1`
2. On both HTML pages:
 - a. Add the appropriate DOCTYPE, html, head and body elements to the file
 - b. Include a comment at the top with your name, date and Exam 1 Practical
 - c. Add a header element which inserts the `header.jpg` at the top of both pages
 - d. Add a nav section with hyperlinks to both pages. Use "Home" and "Party Reservations" for the names of your links.
 - e. Enclose the main part of each page within a main element
 - f. Use the paragraph element where appropriate
 - g. Add a footer with a copyright symbol and hyperlink your email address to the word `Webmaster`.
3. On the `index.html` page:
 - a. Set the title of this page to "Juniper Lane Swim Club"
 - b. Use an appropriate sized heading element for the text "Welcome to Juniper Lane Swim Club!"
 - c. At the end of paragraph 2, hyperlink the memberships email to a mailto link to that email address.
 - d. The address at the bottom should be displayed on three lines as shown in the text file. Enclose the address in a single div element.
4. On the `partyReservations.html` page:
 - a. Set the title of this page to "JLSC Party Reservations"
 - b. Use appropriate sized heading elements for the text "JLSC POOL, GROUNDS & PAVILION RENTAL INFORMATION" and "PARTY RESERVATIONS & GUIDELINES"
 - c. Hyperlink the partyreservations email to a mailto link to that email address
 - d. Hyperlink the text "Party Reservations Details (pdf)" to the `partyguidelines.pdf`
 - e. Insert the `pool3.jpg` file somewhere on this page. Be sure to include alt, width and height with appropriate values for the image.

Style

Apply the following styles to the website using an external style sheet named `style.css`. Link both HTML files to this stylesheet.

1. For the body, use the Arial, Verdana, sans-serif font-family, background color of #1999B7, and text color of #535556. Set the font size to 15px.
2. Center the content of the pages by adding a div with an id of "container" around the nav, main and footer for each page. Then add the styles for that id to set margin-left and margin-right to auto, width to 965px. Set the background color of the container to be white.
3. In the nav section make the font bold, background color of #F7B947 and text color of #0D74BF. Set the font size to 1.5em. Set the text-decoration of your anchor tags in the nav section to none and the padding to 10px.
4. Set the padding for the main to be 10px.
5. Set the footer sections to have the same background color and text color as the nav section. Set the font-style to italic and font size to .8em. Center the text with the text-align property and set the padding to 5px.

Extra Credit

Add any additional styles to receive additional extra credit. In order to receive extra credit, you must identify what you added in the submission textbox on Blackboard.

Submit

Zip up the entire Exam1 folder and submit to the Exam 1 Practical assignment on Blackboard.

Solution

The index file of your solution should look like this:
